SUMMARY

Full-stack developer who builds software with a team of AI agents. On OTILC Store, a real e-commerce store with Pix payments, I designed the architecture, wrote specs with acceptance criteria and reviewed every PR before merging: 37 specs and 50+ PRs, all behind required CI. Before that, as an IT Analyst, I supported the TOTVS WinThor ERP and built internal React and Node.js applications on top of Oracle and MySQL. Completed a 1,500-hour full-stack program at Trybe; B.S. in Computer Engineering in progress at the Federal University of Ceará (UFC).

EXPERIENCE

Full-Stack Developer · Freelance (remote) 2026 – present
OTILC Store · NestJS, Next.js, PostgreSQL (Drizzle), Mercado Pago, Playwright · code

- Streetwear e-commerce for a real client: NestJS API, Next.js storefront and admin panel, PostgreSQL and Pix payments via Mercado Pago (signed webhooks, periodic reconciliation with FOR UPDATE SKIP LOCKED, refunds and chargebacks).
- Concurrency-safe stock: the reservation is a conditional UPDATE inside the order transaction. A test against a real Postgres fires 10 simultaneous purchases of the last unit and exactly one succeeds.
- Built and coordinate a team of AI agents (Claude Code and Codex, with cross-vendor review). I own scope and architecture, write the specs, review the diff and merge. Required CI runs unit, integration and Playwright E2E tests, Semgrep and gitleaks.
- Pre-sale landing page that validated the brand before the store: static site scoring 98 to 100 on Lighthouse.

IT Analyst · Distribuidora Donizete (distribution company) Apr 2025 – Jul 2026

- Supported the TOTVS WinThor ERP across operations, logistics and finance, diagnosing and fixing issues in critical situations.
- Built and maintained internal React and Node.js applications connecting ERP data to company-specific business rules.
- Wrote and optimized SQL queries in Oracle and MySQL for management reports.
- Automated repetitive manual tasks with scripts, cutting rework and data-processing errors.

IT and Networking Intern · Rações Golfinho Jul 2021 – Jan 2022

- Level 1 support, local network maintenance (structured cabling and racks), workstation setup and user access management.

PROJECTS

MyFinPocket · Personal finance app (PWA) code · live
Next.js, TypeScript, Supabase, Zod, Google Gemini, Jest, Playwright, GitHub Actions

- Monthly dashboard, savings goals, budgets and PDF reports. Gemini reads a receipt photo and fills in the transaction.
- Row Level Security in Supabase and middleware-protected routes. Fixed a batch payment endpoint that accepted other users' records.
- Unit tests (Jest) and E2E tests (Playwright) running on GitHub Actions on every push.

TECHNICAL SKILLS

Front end: TypeScript, JavaScript, React, Next.js, Tailwind CSS
Back end: Node.js, NestJS, REST APIs, Zod
Databases: PostgreSQL (Drizzle, Supabase), Oracle, MySQL
Testing and CI: Jest, Playwright (E2E), integration tests, GitHub Actions, Semgrep, Docker
AI: Claude Code, Codex, spec-driven development with agents, Google Gemini API
Systems: TOTVS WinThor (ERP), Windows and Linux

EDUCATION AND LANGUAGES

B.S. in Computer Engineering · Federal University of Ceará (UFC) 2019 – Dec 2027 (expected)
Full-Stack Web Development (1,500 hours) · Trybe 2020 – 2021
Languages: Portuguese (native) · English (intermediate/advanced)
